How flat is your battery?

Even a used button battery can harm your young child.

It can still burn through their food pipe if they swallow one and it gets stuck.

So why keep them in your home?

Recycle while you shop - it's easier than ever

Step 1

Put used batteries in a box and keep it up high

Step 2

Grab the box when you pick up your shopping bags

Step 3

Pop them in the battery recycling bin at the supermarket

Remember, don't throw used batteries away

Button batteries - where are yours?

Button batteries can badly hurt or kill a small child. If they swallow one and it gets stuck, it can burn a hole through their food pipe.

Know where yours are, so you can keep your child safe.

Five top tips

- Look around your home for button batteries. Think toys, lights, remote controls and more.
- Check for products with loose backs and button batteries that have dropped out.
- Store button batteries in a safe place, up high and out of your child's reach.
- Dispose of used button batteries as soon as you can. They are still unsafe.
- Act if you think your child may have swallowed a button battery, go straight to A&E or call an ambulance.

Magnets can rip holes in your child's gut

Magnets can be great fun. But it's really dangerous if a child swallows them.

They can attract to each other inside the body, cut off the blood supply and tear holes in the gut.

A child may need major surgery to remove them. So, keep them away from young children. And teach older children the risks.

If you suspect a child has swallowed magnets, get medical help straight away.

Trigger times

Teach your child to leave your dog alone when they are:

-  Sleeping – no-one likes to be woken up suddenly.
-  Eating or having a treat – they might think you're going to take their food.
-  Have a toy or something else they really like – they might not want to share!

When you cross the road remember:

THINK

Find the safest place to cross. Where possible, use a pedestrian crossing.

STOP

Stand on the pavement near the kerb and make sure that you can see the traffic.

LOOK AND LISTEN

Look all around you for traffic and be sure to listen carefully for things you can't see.

WAIT

Wait until it's safe to cross. If traffic is coming, let it pass. If you're not sure, don't cross.

LOOK AND LISTEN AGAIN

When it is safe, walk straight across the road. Don't run. Keep looking and listening.

Keep water beads away from young children

Children love water beads. But it's really dangerous if a young child swallows them.

They expand in the belly and can block the bowel. Some grow as big as golf balls.

A child may need major surgery to remove them. So please keep them away from young children.

If you suspect a child has swallowed a water bead, get medical help straight away.

Baby bath seats are not safety devices

Drowning is quick and quiet

**Don't leave your baby alone in one
– even for a moment**

Safe baby bath time

Babies and young children can drown in very little water with no sound to warn you it's happening

Get everything ready before you start

Keep small children within arm's reach to keep them safe from drowning

Remember, bath seats aren't safety devices. Babies can slip out or it can tip over

If you need to leave the bathroom take your child with you

Nappy sacks warning!

Young babies under six months naturally grasp things and pull them to their mouths, but then find it difficult to let go.

As nappy sacks are very thin, they can cling to a baby's face as they breathe in and result in suffocation or choking.

Keep nappy sacks well out of reach of children and never put them in a buggy or cot.

Open windows warning

Keep low furniture away from open windows so that children can't climb up and fall out

Install window catches (to limit how far they can open) and locks if you can

If you opt for a lock keep the keys somewhere you can find them in case of emergencies
