

International Dyslexia Learning (IDL) provides specialist multi-sensory software to primary and secondary schools in the UK and around the world.

Offer for Alliance schools:

- 2 month long trials for IDL Literacy, Numeracy, Wellbeing, Dyslexia Screener & Dyscalculia Screener
- No limit on the number of users during the trial and FREE training on request
- 30% discount on the RRP if you decide to buy

IDL Literacy is an intervention software proven to deliver highly effective support for those with dyslexia or lower-level literacy ability.

Our schools report increases in reading and spelling ages of up to two years, with an average increase of 11 months after only 26 hours of use. One of the most notable improvements is in student self-confidence, as their new skills are transferred to their classes and other areas of school life.

IDL Numeracy has been developed to help learners with dyscalculia and lower-level maths ability. It includes a fully graded course to support the primary numeracy curriculum.

In order to be inclusive, the lessons are designed to reduce the stress those with dyscalculia would ordinarily feel when faced with mathematical problems. IDL Numeracy can also be used to support pupils making the move from primary to secondary school who may be struggling with maths.

IDL Wellbeing is designed to integrate with a whole-school approach to mental health, behaviour management and mental toughness.

IDL Wellbeing has been developed using contemporary theories and mindfulness practices. IDL Wellbeing adopts an integrated approach to support children, aged 7 -13, to understand and address unwelcome emotions as well as encourage positive ones.

Included in your IDL school licence...

IDL Numeracy Screener: the Numeracy Screener helps identify areas in which a pupil might struggle and any signs of dyscalculic tendencies. It can be used to screen an entire year group, or individual pupils who are showing signs of maths anxiety or particular maths difficulties. The screener results are instantly available, enabling you to identify areas of strength or weakness. The results will indicate which particular maths principles a student is struggling with and therefore assist with individual assessment, further intervention and lesson planning.

IDL Literacy Screener: the Literacy Screener is a simple, effective online tool that can be used to highlight dyslexic-type difficulties. It can be used with groups and individuals where there may be a concern about their literacy progress. This test is incredibly easy to administer, with only one teacher or teaching assistant invigilating a whole class. Results can then be interpreted by class teachers and SENCOs who will find them invaluable for developing appropriate interventions.
